Public Information Notice
Lanson Drive Bridge Replacement

December 2, 2019

Construction continues on the new Lanson Drive Bridge. NJR Construction has performed the excavation and installed the precast concrete components that make up the bridge. The detour has been removed as of November 30, 2019.

The opening has allowed use of the bridge, but there are several items of work that remain to be completed. Construction will continue over the next several weeks to finish the items that are possible given current weather conditions such as guide rails and temporary stabilization of exposed excavations.

The parking area for the Sue Grossman Walkway is also open but the parking area is not maintained during the winter.

These photos show the current status of construction:
